World navigation base
Custom or real weather
30 plus aircraft fleet*

Welcome to a new era of desktop simulation, the Precision Flight Controls CAT III. The CAT III offers even more features and functionality than our CAT II system. Combined with our digital avionics and rudder pedals this complex system meets and exceeds the FAA's qualification requirements for BATD approval.

The CAT III is economical to own and operate and is designed for virtually maintenance free operation. Simply put, there are no other flight consoles with more functionality and features on the market today!
